

# Climate Chaos

## Day 1 Morning session: Gathering information about climate change

### Activity 2: Introduction to climate change

**Time required: 20 minutes**

#### **You will need**

- An interactive whiteboard, computer and internet access
- The two partially completed sheets of flipchart paper from Activity 1
- An additional sheet of flipchart paper

#### **Aim**

To give a broad introduction to climate change and to begin to identify some of the causes.

#### **What to do**

Watch [Defra's 2-minute Climate Challenge film on climate change](http://www.climatechallenge.gov.uk/multimedia/film5.html) as a whole class:

<http://www.climatechallenge.gov.uk/multimedia/film5.html>

After you have watched it once, tell pupils that you are going to play it again. Remind them that the film says 'If we could see the gases, the causes of the problem would be obvious to everyone'. Ask the class to look out particularly for the **causes** of climate change identified by the film. Take feedback of the main causes onto flipchart paper.

Go back to the flipchart sheets from the first activity:

- Do they want to add anything about what they know?
- Has the film answered any of their questions?
- Has it raised more questions they want to add?

Add anything they say to the appropriate flipchart.
