

# Climate Chaos

## Day 2 Morning session: More on climate change

### Activity 2: Who is responsible?

**Time required: 20 minutes**

#### You will need

- Internet access to the [Wikipedia maps](http://en.wikipedia.org/wiki/Image:CO2_per_capita_per_country.png#file) (based on data from the US department of Energy) [http://en.wikipedia.org/wiki/Image:CO2\\_per\\_capita\\_per\\_country.png#file](http://en.wikipedia.org/wiki/Image:CO2_per_capita_per_country.png#file)
- A world map

#### Aims

- To raise awareness that what people do might affect others living in another part of the world.
- To raise awareness that countries suffering most from the effects of climate change are not the ones contributing most to it.

#### What to do

Show the class the Wikipedia map of CO<sub>2</sub> per capita per country. Explain that it shows the amount of carbon dioxide produced on average per person, per year.

Discuss with the class what they can see on the map. They may need to refer to a world map to help them answer some of the questions:

- Which countries produce the most carbon dioxide?
- Which parts of the world produce least?
- Does the UK produce a lot of carbon dioxide?
- Which parts of the world are worst affected by climate change?
